Opportunity Cost and Trade-offs

Economic Decisions

When making economic decisions, limited resources force individuals, businesses, and nations to make trade-offs. Trade-offs result in giving up something of value to get what is most wanted. Sometimes the choice can involve the resource of time, for example, choosing to volunteer at an animal shelter instead of going with friends to the local mall. At other times, the choice may involve money—buy the newest music CD or save for a cell phone?

Opportunity Cost

Every time an economic decision is made, there is the risk of not selecting the best choice. The opportunity cost of a decision is what is given up when the alternative choice is not selected. For example, the opportunity cost of deciding to spend one hour studying for a math test is the lost opportunity to spend time with friends. The risk is whether the extra time studying will result in a higher test score.

In business, entrepreneurs make economic decisions hoping the payoff will be profits. The opportunity cost of making a profit includes the entrepreneur limiting the investment of money

in advertising, remodeling, or higher wages for workers.

In government, economic decisions are made concerning how to best provide citizens with goods and services they are not able to provide for themselves. The opportunity cost of decisions includes sacrificing funding to other budget items. For example, fully funding national defense might result in a decrease in funding for services such as transportation or education.

Stone In The Economic Decision-Making Process

	Steps in it	ie Econon	IIC Decision-Making 1	00000
	Economic de	ecision: Ho	w to spend Saturday after	ernoon?
Step One:	List criteria for • Example-		decision. noney; outdoor activity	
Step Two:	money m	—skateboa owing lawr	rding with friends; going	
Step Three:	Consider the a	dvantages	and disadvantages of e	each choice, then rank.
Choice		Rank	Advantage	Disadvantage
Skateboarding with friends		2	outdoor activity, not spending money	not earning money
Going to the movies		3	indoor activity	spending money, not earning money
Earning money mowing lawns		1	outdoor activity	earning money
Step Four	Identify the ch	oice and th	ne opportunity cost of the	ne decision.

Step Four:

Example—The choice is earning money by mowing the lawn. The opportunity cost of the decision is not skateboarding with friends, since it is the next-highest-ranked alternative.
